

Indraprastha Institute of Information Technology, Delhi

IIIT-Delhi - Department of Computer Science & Engineering

Operating Systems - Assignments

Course Resource Package

CSE331 - Assignment 1 (CPU Scheduling & Banker's Algorithm):

- Q1. Compute average waiting time for Round Robin (quantum=4ms) vs SRTF.
- Q2. Show deadlock safety using Banker's Algorithm with given allocation matrix.
- Q3. Implement a multi-threaded matrix multiplication program in C/Java.
- Q4. Explain TLB hit ratio and calculate Effective Access Time (EAT).
