

Indraprastha Institute of Information Technology, Delhi

IIIT-Delhi - Department of Computer Science & Engineering

Operating Systems - Unit Notes

Course Resource Package

IIIT-Delhi CSE331 Lecture Notes (OS Overview):

- Process Context: CPU registers, program counter, stack pointer, and PCB structures.
- Mutex vs Semaphore: Mutex is ownership-based binary flag; Semaphore is counter-based.
- Belady's Anomaly: FIFO page replacement fault rate can increase with more frames.
- Virtual memory translates virtual address (page, offset) to physical frame address.
- Disk scheduling minimizes seek time (head movement latency).
